

Innovators Educational Foundation

# Sponsorship Opportunities

**electrek** FORMULA SUN GRAND PRIX 2025

# Sponsorship Package Overview

## FRIENDS OF THE IEF

Our mission is to empower bright young minds to excel in engineering, the sciences, mathematics, and business through diverse, hands-on learning experiences that prepare them for future career success.

We strive to create public awareness and enthusiasm for academic excellence, engineering innovation, and the transformative technologies that arise from them.

**Friends of the IEF share this vision and contribute their support to help us expand our impact, providing the next generation of STEM leaders with exceptional, immersive learning opportunities.**

## ADD-ON

## CHALLENGE

## RECRUITER

Each year, students from 30+ universities hone critical skills through hands-on experiential learning in:

- engineering design
- fabrication
- controls, battery, and power systems
- vehicle dynamics
- composite structures
- logistics

**The Recruiter package provides direct visibility and access to these high-performing students, making it an ideal platform for recruiting top talent for internships, co-ops, and full-time roles.**

Unlike traditional career fairs, our format fosters targeted, meaningful, and organic interactions—eliminating formalities in favor of real-world engagement.

With a diverse range of universities and academic disciplines represented in one location, sponsors can witness students' work firsthand and connect with future industry leaders in an immersive, dynamic environment.

## PRESS

The Innovator Educational Foundation has been featured in global media outlets and publications, including:

- Electrek Magazine
- The Wall Street Journal
- Million Stories 6-part docuseries
- Local news outlet pick-up

**The Press package encourages continuous efforts to elevate the awareness of the event. Its sponsors consistently bring attention to the amazing participants and overall awareness of important causes.**

Included in this category are experiential learning, STEM, young professional development, and progression toward sustainable energy solutions (EV, solar, lightweight vehicle optimization, etc.).
